24th October 2018

Venue: NCCS Auditorium, Pune

Epithelial-Mesenchymal Transition (EMT) is implicated in development as well as cancer cell stemness, disease progression, metastasis and resistance to therapy. The conference roster will highlight the progress in our understanding of EMT against the background of inherent cellular plasticity, integrating cell and molecular mechanisms to understand these processes. The meeting will be an excellent opportunity to discuss the latest experimental approaches and future directions of EMT in cancer progression. Our program includes speakers who are leading researchers in the different facets of EMT, and will present its new advances in development, fibrosis, cancer and future therapeutic possibilities.
